

VENTURE

Venture Logistics

Venture Logistics - Manage inbound and outbound parcels and freight.

Venture Logistics - Track domestic and international freight due-in by purchase order and warehouse, allowing for the accurate timing of material receipt, expected dates for your customers and offers your warehouse personnel a day-to-week-to-month view of inbound freight.

For outbound shipments, Venture is easily integrated with domestic and international carriers. This means warehouse staff can scan or key order numbers into third party shipping software thereby eliminating data entry for both shipping addresses and tracking numbers both in and out of Venture. Your customers will know the instant their order ships by email alerts and real time access to shipping data via Venture e-commerce.

With Venture Logistics, it's a snap to check on, keep track, and update the following:

- **Purchase Orders** - Inbound freight and parcel packages are tracked, as is inbound data for projected due-date and tracking number
- **Motor Freight** - Management of local, regional and national carriers such as Yellow, ABF, FedEx freight, Overnite and many others
- **Bill of Lading** - This document generation is performed directly in Venture
- **Billing / Freight Reconciliation** - Get what you pay for, and don't pay for what you don't get.
- **Outbound Orders / Inbound Packages**
